Carrier Objective

To secure a challenging position where I can capitalize my technical skills in the field of Computer Science.

Skills

- Programming Skills: Python and its libraries (Pandas, Numpy, Matplotlib, PyTorch, Sklearn), JavaScript, TypeScript, git
- Databases and Server Tools: SQL Server, MySQL, PostgreSQL, SSRS, SSIS
- Power BI Desktop, Power Query, Data Modeling, Data Visualization, DAX Languages
- Proficient in Atlassian Tools Jira/Confluence, Gitlab for user stories and test case management and also in Test Mo, Test link for test case management
- Automation: Detox, Playwright, Cypress and Xcode, Android Studio, Maestro
- Tools: Visual Studio Code, Docker
- Knowledge in CRM- Salesforce and had worked in it
- Project Management, Software Development Life Cycle, Software Testing Life Cycle

Education

University of South Dakota, MS in Computer Science

Jan 2025 – May 2026

Tribhuvan University, B.E in Computer Engineering

Dec 2013 – Dec 20217

Experience

Software Engineer in Test, Delicious AI, Utah USA

May 2021 – Dec 2025

AI-powered shelf intelligence platform for convenience stores, CPG brands distributors (planogram compliance, restock optimization, display execution, PicOs priority management)

- Conducted functional and regression testing of the Delicious AI iOS mobile application on iPhone and iPad devices, covering core user flows including store setup, sales optimization , and AI scan verification
- Executed automated test suites using Detox (React Native mobile automation) for end-to-end mobile scenarios, utilized Playwright and Cypress for web-based dashboard and command center testing
- Documented and tracked defects in TestLink and TestMo, covering features such as planogram compliance checks, empty facing detection, restock scheduling, and store task management workflows, Auditing
- Performed performance testing on the AI visual recognition engine, validating 95%+ accuracy benchmarks for product identification and shelf image analysis
- Contributed QA perspective to feature scoping for key product areas: sales execution, restock optimization, PicOs priority management, and display auditing workflows
- Communicated test execution, bug status, and UX feedback to stakeholders and the CEO through structured reporting, data-driven charts, and feature readiness assessments to ensure clear project visibility and product improvement
- Implemented job that that serve the model quality, deployed containerized microservices with docker and created production ready services and microservices

Software Engineer- Quality, ComplianceQuest – Tampa, Florida

Dec 2019 – Jun 2021

AI-powered Salesforce-native Enterprise Quality Management System (EQMS)

Product: Cloud-based EQMS platform for regulated industries (Life Sciences, Medical Devices, Manufacturing) covering quality, compliance, and regulatory workflows

Requirements Analysis & Test Planning

- Analyzed BRDs, FRS, and Technical Design Documents for modules including Nonconformance Management, CAPA, Complaint Management, Investigation Enhancement, AS2 Gateways and 5-Why Root Cause Analysis
- Developed system test plans, test cases, and scripts based on product specifications and domain knowledge
- Conducted BRD analysis sessions with developers, stakeholders, and leadership to define acceptance criteria and validate feature scope

Project Leadership & Environment Management

- Served as Project Lead managing test preparation, sprint execution, and cross-team coordination
- Prepared Installation Manuals, Upgrade Manuals, and Release Notes for deployments
- Configured and managed Salesforce Sandbox and Production environments
- Reviewed team deliverables and ensured quality standards across Agile sprints
- Performed sprint tracking, reporting, and retrospectives

Module Testing — EQMS Core Features

- Executed functional, regression, smoke, migration, and exploratory testing
- **Nonconformance Management:** validated deviation workflows, routing, approvals, and CAPA triggers
- **CAPA Management:** tested end-to-end corrective/preventive workflows and effectiveness checks
- **Complaint Management:** validated intake, triage, investigation, and regulatory escalation workflows
- **Investigation Enhancement & 5-Why:** verified root cause analysis tools and logic branching
- **Audit Management:** tested audit scheduling, findings tracking, and CAPA linkage
- Reported defects with detailed reproduction steps, severity, and tracking

Regulatory Reporting — AS2 Gateway & FDA/PMDA/TGA

- Tested MDR e-Gateway (AS2 Gateway Services) for FDA electronic submissions
- Validated AS2 protocols with digital certificates
- Verified automated submission pipelines, ACK1/ACK2 handling, and failure alerts
- Tested MedWatch Form FDA 3500A generation and eMDR submissions to FDA ESG
- Validated high-volume batch and real-time regulatory submissions
- Tested reporting workflows for PMDA (Japan) and TGA (Australia)

OQ/PQ Script Development & Documentation

- Authored and executed OQ (Operational Qualification) and PQ (Performance Qualification) scripts
- Reviewed validation scripts and maintained documentation control

Client Support & Communication

- Primary support contact for LifeScan and Sanvita Medical
- Resolved installation, configuration, and defect-related issues
- Delivered updates, feedback, and presentations to clients
- Provided guidance on EQMS modules including Nonconformance, Complaint Management, Investigation Enhancement and Regulatory Reporting

Software QA Engineer, Synergy Infosys – Kathmandu, Nepal
PN3 Solutions (Paper Less Purchasing and Payment authorization System)

Mar 2018 – Dec 2019

- Identifying and documenting all issues and defects to ensure the desired quality of the business application
- Performing extensive backend testing/database testing, smoke testing, system testing, Integration testing and regression testing

Workshop And Achievement

PulmoscanAI — Entrepreneur Lead

NSF I-Corps Hub: Great Plains

- Led customer discovery efforts by conducting 60+ interviews with clinicians, radiologists, investors, and executives
- Developed value propositions, tested hypotheses, and presented customer insights to mentors and program directors
- Collaborated with cross-functional teammates and technical mentors to iterate on product design and use cases
- Gained hands-on experience in early-stage innovation, lean startup methodology, and market analysis
- Strengthened entrepreneurial mindset by aligning technology capabilities with real-world user needs

Awarded with Best Employee

Seva Development (Delicious AI)
